

## StarParts Quick Tips

- Mopar Note 

If a part has “See Note” in the description the note is located in the upper left part of the screen right above the printer icon. The picture below displays the green note.

- Sales Code Lookup Tool

When using a VIN all the Sales Codes will be listed that are valid for that vehicle. If you are not using a VIN the field will be blank and allow you to type in the code and retrieve the description.

- StarParts Filter 

StarParts is VIN filtered but not always 100%, you may be required to view all the parts listed for this model year family. This can be done by clicking on the Air Filter icon on the toolbar across the top.

- StarParts Search 

The StarParts search feature doesn't pull results for the following part types below. We are in the process of trying to incorporate all these parts in the search function in a future release of StarParts.

- Parts within the Supersedence chain
- Reman - A search for a Reman part may result in a reference to an OE part number or a Reman part number. It will differ depending on the method in which the part was cataloged.
- Value Line - a search for a Value Line part may result in a reference to an OE part number. The OE part reference is the application for the Value line part.
